AMERICA'S PART

I rejoice in the knowledge that America has won the right to be at the conference table when the terms of peace are being discussed. That conference will settle the destiny of nations—the course of human life—for God knows how many ages. It would have been tragic for mankind if America had not been there, and there with the influence, all the power and the right which she has now won by flinging herself into this great struggle. I can see peace coming now—not a peace which will be the beginning of war; not a peace which will be an endless preparation for strife and bloodshed; but a real peace. The world is an old world. It has never had peace. It has been rocking and swaying like an ocean, and Europe—poor Europe!—has always lived under the menace of the sword. When this war began two-thirds of Europe were under autocratic rule. It is the other way about now, and democracy means peace. The democracy of France did not want war; the democracy of Italy, hesitated long before they entered the war; the democracy of this country shrank from it—shrank and shuddered. The democracies sought peace; strove for peace. If Prussia had been a democracy there would have been no war. Strange things have happened in this war. There are stranger things to come, and they are coming rapidly.—LLOYD GEORGE.

A World Citizen

In 1807 an English youth named James Wilson landed in Philadelphia, got work as a printer, that old craft of adventurers and wanderers and small purses stuffed with hope. He married an Ulster girl, who had come over in the same emigrant ship. He thrived as a printer and editor in Pittsburgh, whence his son, after learning the trade, went to college, became a Presbyterian minister, after the fashion of so many Ulsterites, took for a wife in 1849 Jessie Woodrow, daughter of a Scotch Presbyterian minister from the town of Carlisle, England. The Woodrows emigrated to Canada and thence to Ohio.

The younger Wilson was mostly a professor. In 1855 he became pastor of a church in Staunton, Va. There, sixty-two years ago, was born the child who, by whatever various gifts of will, of genius, of destiny, of energy, of industry, of ambition prudently and fortunately directed, is now the guest of Kings, the hope and favorite of many peoples, perhaps the foremost man of all this world.

Descendant on both sides of immigrants of the early nineteenth century, on both sides of that acute, intense, metaphysical Scoth Presbyterian brainy race which has filled libraries with theories of the universe and man, fought as stiffly as it argued, added much, perhaps, to the grace of life or the enemity of controversy, but in State and Church showed tenacity of moral purpose, capacity for public service, solidity, a sort of basaltic salient character, Woodrow Wilson inherited an intellectual tradition, high standards of life, the modest or narrow circumstances that are among the best spurs to manly endeavor.

He was born a professor so to speak. The variousness of his academic environment in his early years seemed to bespeak for him that subdued but far-spreading influence which came to him as the head of a renowned university. He studied government and politics. He wrote history before he made it. He fitted himself, consciously or unconsciously, for the marvelous career that no man can have dreamed of ten years ago. It seems like a story from fairyland, his sudden rise, but he had long prepared himself for it. He was equal to the highest posts and duties. We knew him as a politician of surpassing acumen and success, a wielder and master of Congresses, a thinker-out and maker of great policies, a speaker and writer of golden words; but nobody knew him in his first term. Not till he had led a peaceful people to war and filled them with the ardor of his own conviction, not until his long patience, his unyielding courage, his large perception of essentials and general principles, the passion and the power of his speech had filled the world with his fame, did we begin to see the measure of the man. There are flaws enough to pick in him, and the bitterness of censure has been equal to the fervor of the praise. This, at least, no one will deny him, that before he has reached the grand climacteric of age he has reached that of fame. More applauded, more illustrious, more powerful he cannot be, nor can he inspire a more sympathetic interest or kindle a wider attention in the world. It is his shining merit, his unique position among the leaders of democracy, the plentitude of his fame that strikes the mind.

The emigrant returns, bringing his sheaves with him. He paid a pious visit to Carlisle, the home of his mother. The dissenting minister's grandson goes back to the old home, "the pillar of a people's hope, the center of a world's desire." He found in the United States an opportunity which he has memorably used. To millions "who have inherited nothing but poverty and health," opportunity still offers itself, in this country of infinite hope and occasion. Within the limit of his powers every immigrant, every immigrant's son, can make himself useful, honored, successful.

God speed and bless and keep you, Mr. President.—*Vedman Shield.*

Local and Personal

House for rent in center of town.
C. H. WHITMAN.

E. E. Sower for Men's, Boy's and Children's Shoes. Up-to-date Shoe Repair Shop.

Lost: Forty Dollars in Greenbacks, in envelope. Return to owner, J. W. Hirst, Walker Avenue., Los Gatos.

Mr. and Mrs. A. B. Covey, of Millbury, formerly of Campbell, are rejoicing in the birth of a son.

We are glad to report that little Party Kammerer seems to be improving nicely and her parents are encouraged.

Mrs. Flora Crow has been visiting her daughter in Berkeley during the past week and expects to return today.

Edward Vandergon returned Saturday evening from Minnesota where he has been visiting relatives since his discharge from the army.

Louis Genasci writes from France that he received the Red Cross Christmas card and package on January 5th and sure was glad to get it, and thanks the Red Cross for the same.

Mr. and Mrs. J. J. Finch of San Jose were visitors at the Press Office this week. They were formerly residents of Pacific Grove and think San Jose a pretty cold place in winter.

Mrs. Ellen R. Smith has sold her ranch on McCoy avenue to H. Hiatt, who will take possession at once. Mrs. Smith desires to remain in Campbell for the present and said the first of the week that she had secured a house. Mrs. Smith's friends, whose number is only limited by the extent of the acquaintance, are very desirous of her remaining here, as she occupies a place in the community that no one else can fill.

Mrs. Chas. Townsend Honor Guest

Mrs. Chas. Townsend was tendered a reception Thursday afternoon by the ladies of the Guild of which she has been an active member and most faithful worker for many years.

The spacious rooms of the Manse were well filled with ladies, glad of an opportunity to show their appreciation of the services and their friendship for their co-worker.

Several charming selections were played by Mrs. Preston on their victrola, and humorous readings were given by Mrs. Lillie Shaw and Mrs. H. C. Smith.

The president of the Guild then presented Mrs. Townsend with a prettily bound birthday book, in which all the ladies inscribed their names.

Tea and delicious cakes were served and after many expressions of regret for the loss the church and community were sustaining in the departure of the Townsend family, and of good wishes for happiness and prosperity in their new home, the gathering broke up, after singing "Blest Be The Tie That Binds."

Mr. Townsend has built a house on his ranch at Hollister where the family will make their home. Their house here has been rented and will be occupied by Mr. and Mrs. W. B. Lowery and their son-in-law and daughter, Mr. and Mrs. Henry Brett.

Mr. and Mrs. W. H. Cornes of Aurora, Illinois, an uncle and aunt of H. N. Cornes thoroughly surprised the Cornes family last Friday morning by walking into the Press Office and making a visit Friday and Saturday. They will also visit a son in Los Angles before returning to Illinois.

Washing Made Easy

Thinking pays.

It hasn't been so very long since water for washing was carried from the pump. The washing itself was often done with vile-smelling soft soap. We do it differently now. There is running water in the house; the stationary wash tub; and the finest hard soap that science can devise. Some thinking has been done. The labor of washing has been reduced three-fourths. Thinking has paid.

But—not every housekeeper is right up with the times in helps for ease and convenience in laundry work. Take, now, the La France Laundry Tablet. It is not known by one housekeeper in five. Yet here is an illustration of its virtues: A lady dissolved one-half of a La France tablet in her wash-water, and put in some clothes. On looking at the clothes a moment later she was so amazed at their whiteness that she ran upstairs to see if clean garments hadn't been gotten by mistake instead of soiled ones. But it was all due to the astonishing efficiency of the tablet. The story is true.

And again, there is Lux, a particularly high grade soap flake. It is adapted to washing of the finer kind; such as Crepe de Chine, silk stockings, woolens, sweaters, laces, and chamois gloves. It also makes a splendid shampoo.

A third good one is Parson's Household Ammonia. For washing walls, for the sink, for mopping the floor, for a hundred other uses, Parson's Ammonia is a labor saver—which means, for the housekeeper, longer life, rested nerves, and a sweet disposition.

La France Washing Tablets sell two for 15c; a package of Lux is 15c; and Parson's Household Ammonia is 25c. The investment is trifling. Order them all.

Learning to use anything new requires thought—but thinking pays.

A Toasst To The Flag

Here's to the red of it—
There's not a thread of it,
No nor a shred of it
In all the spread of it,
From foot to head
But heroes bled for it,
Faced steel and lead for it.
Precious blood shed for it,
Bathing it Red.

Here's to the white of it—
Thrilled by the sight of it.
Who knows the right of it,
But feels the might of it
Through day and night,
Womanhood's care for it
Made manhood dare for it;
Purity's prayer for it
Keeps it so white.

Here's to the blue of it—
Heavenly view of it
Star-spangled hue of it,
Honesty's due of it,
Constant and true.
Here's to the whole of it,
Stars, stripes, and pole of it,
Heres to the soul of it—
Red, White and Blue.—J. J. D.

Mr. Charles R. Hicks of New York, the new Y. M. C. A. County Secretary for Santa Clara County gave us a pleasant call at the press Office this week and impresses us as the right man for the place and hope he will have the hearty supprort of the community in his work.

Mr. Hicks comes to take up this work at very trying time when so many are criticising the Y. M. C. A. We all know the great value of the work. Lend a hand and make him welcome in our midst.

PUBLIC ROADS

ROAD WORK AWAITED PEACE

Small Amount Money Expended Because of Desire to Conserve Labor, Money and Transportation.

(Prepared by the United States Department of Agriculture.)

Although $14,550,000 was available for expenditure on the post roads from the federal aid road act, only $425,445 was paid from federal funds in the highway construction season of 1918 on all projects. The reason for this, according to the annual report of the secretary of agriculture, was the steps taken to conserve money, labor, transportation and materials in highway work during the war, and at the same time to facilitate really essential highway projects.

In connection with the federal aid road work, a letter was addressed to each state highway department asking that a program of federal aid construction be submitted at the earliest possible date, in which would be included only those projects which the state highway departments considered vitally necessary to the transportation facilities of the country.

At the request of the capital issues committee, engineers of the department were made available for inspecting and reporting upon proposed highway and irrigation and drainage bond issues. Inspections were made of 181 separate projects, involving total bond issues of $36,912,396. An arrangement was made with the fuel administration whereby highways of special importance should receive enough bituminous material to provide for adequate maintenance, and, where necessary, to permit construction and reconstruction. From May 13, 1918, when the co-operation became actively effective, until the close of the fiscal year, 2,235 applications, calling for 75,000,000 gallons of bituminous material, were received from states, counties and municipalities. Of this amount approval was given and permits were issued for 58,000,000 gallons.

In order to co-ordinate the activities of various government agencies, so far as they relate to highways; better to conserve materials, transportation, money and labor; to eliminate delays and uncertainties, and to provide positive assistance in carrying on vitally effective highway work, the secretary requested each of the government departments and administrations interested to name a representative to serve on a council to deal with highway projects during the period of the war. As a result, the United States highways council, consisting of a representative from the department of agriculture, the war department, the railroad administration, the war industries board and the fuel administration was formed in June. During the first four months of its existence the council passed upon about 5,000 applications, involving nearly 4,000,000 barrels of cement, 3,250,000 tons of stone, 1,140,000 tons of gravel, 1,207,000 tons of sand, over 77,000,000 brick, and nearly 20,000,000 pounds of steel, and 140,000,000 gallons of bituminous materials.

Truck Load of Hot Bituminous Concrete Being Dumped Ready to Be Placed on Surface.

FAULTY CONDITION OF ROADS

Often Due to Small Appropriations in Endeavor to Make Cheap Surface Endure.

Too often faulty road conditions are due to too small appropriations in the endeavor to make a cheap surface endure under heavy traffic. Where traffic of any consequence exists, the cheapest road to build is usually the most expensive in the end.

Permanent Investment.

Every dollar spent in good roads is a permanent, paying investment, peopleizing public highways and promoting legitimate traffic and travel between communities. Good roads make near neighbors of once distant strangers.

POULTRY

MOST PRODUCTIVE HEN TYPE

Poultry Keepers Aim to Combine Economy and Efficiency—More Eggs From Fewer Hens.

(Prepared by the United States Department of Agriculture.)

American poultry keepers as a class have always aimed to combine economy and efficiency in poultry production. In war-time patriotism impels them to extraordinary efforts in this direction, moving them to do everything, and to leave nothing undone that will help to quickly increase the nation's supplies of poultry and eggs. It is not the high cost of feed alone, since America entered the war, that has led to more careful attention to the routine work in poultry keeping, and to greater judgment and skill in feeding. The saving of money has been an incentive, but, above and beyond that, every poultry keeper realizes that getting better production from less feed is doing double duty in conservation and production—saving feed and at the same time increasing food.

That American poultry keepers are, on the whole, more efficient in egg production seems to be plainly indicated by the fact that, as compared with the period before the war, market receipts of eggs increased more than receipts of poultry. Reports from persons in touch with production in many localities agree that more eggs are being produced from the usual numbers of hens kept, and in many instances from smaller numbers. It may well be presumed that such efficiency in one line of production extends to others closely co-ordinated with it, and that poultry meat is being grown more economically—though no common statistics indicate it, and it is not so readily observed in common practice.

Among professional breeders of standard poultry the first result of war-time conditions was to emphasize afresh, and more effectively than ever, the benefits of rigid selection of breeding stock and severe culling of the young stock while growing. The high cost of feed hit this class of poultry keepers hardest because, even under normal conditions, a considerable part of their stock must be carried for quite a long time after coming to maturity before it is sold. The concentration of interest and industry upon things immediately relating to the conduct of the war and the production of food tended to decrease the demand for their stock.

So, with stock actually costing a great deal more than in normal times, they had to face the problem of either reduced sales or lower prices on good grades of stock to attract trade. Some chose one alternative, some the other; but all adopted the policy of using only

Barred Plymouth Rock Hen.

breeders of the very best type, and so reducing to the lowest practical point the waste of feeding inferior young stock.

Professional breeders were compelled to do this, because no other plan of economizing comparable to it in efficiency was open to them. Good feed in abundance had to be used, whatever the cost, or their birds would not attain full development and command profitable prices.

Their methods generally are so well adapted to their work that no considerable saving of time and labor is possible. The only solution of their problem was the exclusive production of poultry of the quality that would bring profitable prices, for in feed and care birds of high quality cost no more to produce than those of greatly inferior quality.

For the professional breeder this exact adaptation of the stock to the end for which it is designed is a necessity. In the matter of producing eggs and meat there is not the same absolute necessity. The volume of production can be maintained, and even greatly increased, by the continuance and extension of those better practices which have made possible so much of the increase which has already been attained. But if the producers of eggs and poultry for the table are to do their utmost to increase the supplies of those products, the easiest, the shortest and the surest way is through general use of the most productive types; that is, by the use on the part of every poultry keeper of the most productive types in his stock. It is not meant that there should be wholesale replacement of ordinary stocks by stock of strains celebrated for extreme high production. That may be done to advantage in many instances. But with the great majority of poultry keepers immediate gain in production must be made by good use of such stock as they have.

Care for Crippled Soldiers

Government Plans to Give All Vocational Training and to Find Employment for Them

It is intended by the government that there shall be no crippled soldiers selling pencils and shoe strings on the street corners, and small necessity for "homes" where crippled men may be cared for.

The government has made plans to re-educate every disabled soldier and sailor, to secure employment for him, and to watch over his welfare thereafter that he may be independent and self-respecting. The actual steps which the government will take are five:

1—Election by the disabled men of a course of training.
2—Preliminary training to fit him for a definite occupation.
3—A probationary period of employment in that occupation.
4—Placement in suitable position.
5—Follow-up work to safeguard his interests.

The government will support the man while training, will pay his tuition, traveling expenses and any other expenses incident to his training, and will give his family the same support which it has given during his military service.

The disabled man may elect the line of work he wants to take up. He may be retrained for the work he did before the war, or turn to something entirely different. He may take further training in his old occupation.

And in addition to his support and the support of his family he will be given all the medical care he needs, and will be supplied with any artificial contrivances necessary because of the loss of limbs or faculties.

The machinery through which this work of rehabilitation will be handled consists of a federal board of vocational re-education with branches in the principal cities of the country. David F. Houston, secretary of agriculture, is chairman of the board; William C. Redfield, secretary of commerce, and William B. Wilson, secretary of labor, are also on the board, and an executive staff of experts in vocational education have been employed.

Mother's Cook Book

Ah, what would the world be to us
If the children were no more?
We would dread the desert behind us,
Worse than the dark before.

What to Feed the Child.

For a normal baby, with a normal mother, the first few months or a year there is nothing better to do than feed it with nature's food, mother's milk. Orange juice and water for refreshment will cool the swollen gums and give great relief when teething.

If the child has taken prune juice, unsweetened, and orange juice occasionally the digestive tract will be in good working order. Then in the second year scraped apple or other fruits like pears and peaches if well ripened, may be safely given in very small quantities. A drink of cool water should be given frequently. How many worrying babies, who cannot tell what they want would be made comfortable by frequent drinks of pure cool water.

All changes in a child's diet should be made very carefully and when any new food is introduced give it in small quantities, a teaspoonful or two being sufficient.

Baked potato is a food particularly adapted for a young child's food. Use a little milk with a grain or two of salt, then cream and butter may be added. After a child has become accustomed to potato a teaspoonful of finely mashed peas may be given, as well as carrot, spinach and any vegetable not too woody.

Given to the child in small quantities, well mashed and seasoned, he will learn to like all kinds of vegetables; in fact he will never need to learn, for the good habit will be formed early in life.

A child's digestion is so much more rapid than an adult's that they need to be fed oftener and in small quantities.

A child fifteen months old will need some such diet as to food and time as the following: At seven or eight a breakfast cereal, bread or toast and a cupful of milk; at noon an egg, potato, one other vegetable, bread and fruit, either juice or scraped fruit. Five or six, milk and rice or bread, and at ten a cupful or bottle of milk. The cereals should be varied so that they may become accustomed to like a variety.

The chief thing to remember in cooking cereals for children is to cook them long enough. Serve with good top milk and no sugar. In early youth the child gets all the sugar he needs from the fruit he eats. One good reason for having little people eat alone is that foods that must be denied them are not put temptingly before them.

Nellie Maxwell

Latest Vending Machine Is Detector of Spurious Coin

One of the interesting developments in the vending machine field is a large apparatus that dispenses bottled beverages, sandwiches and chewing gum. In order to encourage patrons to return empty bottles to the machine, a stick of gum is discharged when a bottle is placed in the receiver provided for it. A counterfeit detector rejects spurious coins. A complete record of all transactions is kept by a sales registering mechanism. The only attention the machine requires is that involved in stocking and icing it daily.

Suffrage States.

These states have full suffrage for women: Washington, Oregon, California, Idaho, Montana, Wyoming, Nevada, Utah, Colorado, Arizona, Kansas, New York. Presidential and other partial suffrage: Illinois. Taxation, bond or school suffrage: North Dakota, South Dakota, Nebraska, New Mexico, Oklahoma, Minnesota, Wisconsin, Iowa, Louisiana, Mississippi, Kentucky, Ohio, Michigan, Vermont, New Hampshire, Massachusetts, Connecticut.

Why Wisconsin Is Known as "Badger" State and Origin of "Sucker" for Illinois

Wisconsin is called the Badger state, not, as most people seem to think, because the badger formerly abounded there, for in the past Wisconsin was never a favorite home of this little quadruped, writes a correspondent.

The familiar nickname originated rather with the early settlement of southwestern Wisconsin, whose lead mines attracted the first considerable migration to Wisconsin. The hardy lead miners who pushed into the portion of the northwestern wilderness intent on digging fortunes from the earth with their picks were composed in the main of two groups. One, made up of men from southern Illinois and further south, went down the Mississippi to their homes every winter and returned in the spring to labor for another season; the other, composed of miners from the Eastern states, could not thus easily go home, and so they "burrowed in" for the winter in rude shacks or huts, which frequently were built after the fashion of dugouts.

The men who went south for the winter and returned in the spring were given the name of "suckers" from the similarity of this practice with that of the well-known fish of the Mississippi, Rock and other Western streams.

The men who wintered in the lead mines were called "badgers." They were the first permanent settlers in the lead mines north of the Wisconsin line, and thus the name became associated with the state.

Thus did the people of Wisconsin and Illinois gain the popular nicknames of "Badger" and "Sucker" by which they have ever since been known.

Memorial Planned to Dogs Sacrificed in Gas Tests

Prompted by girls of the chorus at the Hippodrome and indorsed by other women, and, it is said, by the New York club and the Toy Dog club, a movement is under way to set up a memorial to the dogs whose lives were sacrificed in experimental work for the army. It is stated that the chemical warfare division of the war department used on an average of 80 dogs a month in testing gases and protection devices. It was suggested that a fund be raised for the erection of a dog's drinking fountain in a park to bear a tablet explaining the service done for humanity by the dogs.

HOUSEHOLD HINTS

To prevent mustard from drying in the mustard pot, add a little salt when making it.

Tan shoes which have become discolored can be dyed black and have their usefulness prolonged.

Cold boiled rice added to griddle cakes makes them lighter.

Persian ladies ornament their faces by painting on them figures of insects and small animals.

It takes three men six months to make a cashmere shawl, which requires ten goats' fleeces.

Men, Women and Children Helped Bring Big Victory

Just what name posterity will give to the war nobody of the immediate present can say; but if it is fairly descriptive it will perhaps somehow include or suggest the part taken by the women, who, in 17 months, for one thing, have turned out something over 14,000,000 knitted articles. The women, in fact, have knit themselves into history in a way that the future historian will have to take into consideration. Literally it has been a war of men, women and children against an impending tyranny.

BORER IS ENEMY OF FUTURE CORN CROPS

Growers Urged to Watch for Destructive Insect.

If Pest Should Escape to Corn Belt It Undoubtedly Will Become Most Destructive Enemy—Insect Found in Stalk.

(Prepared by the United States Department of Agriculture.)

Future corn crops of the United States will be exposed to the European corn borer, the most destructive enemy of maize which has ever invaded this country, unless growers co-operate actively with federal and state authorities in stamping out the pest. The initial outbreak of the borer was discovered in Massachusetts, near Boston, and at present the territory in which it appears is confined to eastern Massachusetts. If this pest should escape to the corn belt, it undoubtedly will become the most destructive enemy of corn which has ever occurred in the

Work of European Corn Borer.

United States, because its capabilities of inflicting injury to the crop are almost limitless. State and federal authorities are striving to destroy the insect, and to control and confine it within the present infested area.

Corn growers and other interested persons are requested to co-operate with these authorities by carefully examining cornfields, stalks of corn, and dried vegetation in such fields, to determine whether the insect is present. Stalks and stems should be split open from end to end and if a slender, dirty white or pinkish, naked caterpillar is discovered therein, the examiner should communicate with the State Entomologist, State Experiment Station, State Board of Agriculture, or the Bureau of Entomology, United States Department of Agriculture, Washington, D. C.

The parent of the European corn borer is a yellowish moth measuring about one inch across the expanded wings. It lays its eggs upon the corn leaves or leaves of grasses or weeds in or near the cornfields. These eggs soon hatch and young caterpillars appear and begin feeding on near-by leaves. Later they crawl to the unfolding heads of the corn and begin their work of destruction. They frequently bore into the tassel stem, devouring its internal portions to such an extent that the tassel will fall off. This phase of injury is readily seen and is usually the first indication of the presence of this borer. When the caterpillars become larger they attack the main stalks at the base of the leaves and it is not unusual to find more than 25 insects attacking a single stalk of corn. After the ears have formed they are promptly attacked and very seriously injured.

The caterpillar is almost naked, slender, pinkish or dirty white in color, and about three-fourths of an inch in length. Almost invariably it is to be found within the stalk or other portions of the plant, as its instinct causes the caterpillar to hide away within the plant upon which it may be feeding. When the caterpillars mature they pupate within the stalks, and about August 1, in the neighborhood of Boston a new brood of moths emerges to lay their eggs upon the corn, and thus continue the work of destruction. The caterpillars resulting from this summer brood of moths live throughout the winter, hidden within the dead and dried stalks of corn, stems of grass weeds and green garden vegetables where even the coldest weather does not injure them in the least. However, at this time, they may easily be destroyed by burning such vegetation while it is dry and in good condition to ignite readily. It is more important that all grasses and large weeds which have grown in and near cornfields be burned, because these may harbor thousands of caterpillars. Destruction of the insects by burning, as described above, is the only satisfactory means of destroying the pest which has yet been discovered. All efforts to poison the insects have proven both expensive and unavailing.

Raise Good Chickens.

Even though you raise but a few chickens every year, they should be good birds and worth raising. You cannot afford to give your time and feed to poor fowls.

Problem of Feeding.

The problem of feeding the world is not one for the world to solve, but for individual communities. Each community must have a definite agricultural plan.

DAIRY

RATIONS FOR DAIRY CATTLE

Corn Stover Should Form One of Main Sources of Roughage for Cows and Young Stock.

(Prepared by the United States Department of Agriculture.)

While corn stover and straw from the various cereals are not adapted for producing the largest flow of milk, they may be fed to dairy cattle. The amount to use of these materials will depend, of course, upon the supply at hand on the farm. When an abundance of corn stover is available it should form one of the main sources of dry roughage for dry cows, young stock, and cows in milk. To use stover economically it should be cut or shredded, for then it will be eaten more completely and there will be less waste.

Corn stover may be fed to milking cows without limit, when they receive in addition grain, silage, and some leguminous hay. Under these conditions the ordinary cow will eat a large part of from 6 to 8 pounds of stover daily. For dry cows and young stock the proportion can be greatly increased, care being taken to be sure that there is plenty of protein in the ration. In certain instances corn stover has been cut and put into the silo with the addition of plenty of water, and the resulting silage is of fair quality. If a silo is available, empty or partly so, corn fodder which has been well shocked and is not severely weathered may be ensiled to advantage. Put up in this form it is more convenient for feeding in the barn, and cows will consume more of it than if fed dry.

Oat, barley, and wheat straw can form a considerable portion of the dry roughage for all classes of dairy cattle. Straw is used in much the same proportions as corn stover, and a sprinkling of thin molasses has been found to increase greatly the palatability, causing the cows to consume large quantities of the straw. When feeding barley straw it is advisable to examine the mouths of the cattle occasionally, as the beards of the barley when very dry and stiff sometimes cause painful irritations. Rye straw cannot be recommended for dairy cattle, because of danger from ergot and on account of the very tough and fibrous nature of the straw. Buckwheat straw has a very low feeding value and should be used when other roughages are not obtainable, but in no case should any straw be wasted. What cannot be fed should be used for bedding. The following rations containing corn fodder and straw should give good results with dairy stock:

By Breeding to Superior Sires Milk Production Can Be Greatly Increased in Single Generation and Greater Economy Effected.

Ration for Dry Cows, Bulls and Heifers.

Corn stover and straw	Unlimited
Clover hay	10 pounds
Corn silage	20 pounds
Cottonseed meal	1 pound
Corn-and-cob meal	2 pounds

Ration for Cow About to Calve.

Corn stover	5 pounds
Clover hay	12 pounds
Corn silage	25 pounds
Wheat bran	3 pounds

Ration for Cow Giving 16 Pounds of 4 Per Cent Milk.

Corn stover and straw	Unlimited
Clover hay	12 pounds
Corn silage	20 pounds
Cottonseed meal	2 pounds
Corn-and-cob meal	3 pounds

Ration for Cow Giving From 20 to 25 Pounds of 4 Per Cent Milk.

Corn stover and straw	Unlimited
Clover hay	12 pounds
Corn silage	25 pounds
Cottonseed meal	2 pounds
Corn-and-cob meal	3 pounds
Gluten feed	3 pounds

HELP CONTROL OF DISEASES

All Ailments of Workers on Farms Should Be Reported at Once to Authorities.

A dairyman should report any contagious diseases among the workers on his farm to the health authorities and in this way assist in the control of the diseases promptly. Only healthy men should be permitted to work with the cows and handle the milk, as there is great danger of transmitting diseases to customers if necessary precautions are not considered.

HAVE COW FRESHEN IN FALL

More Milk Is Obtainable and Calves Are Ready to Turn Out to Pasture in Spring.

It is well to remember that it pays to have the cows freshen in the fall. Then there is more time to milk them and the milk brings a better price. The calves that are born in the fall are ready to turn out to pasture in the spring while calves born in the spring need milk and grain when they should be out harvesting cheap feed for themselves in the pasture.

Hieroglyphics to Be Found in California Are Believed Older Than Those in Egypt

Amateur archeologists of Bishop, Cal., are endeavoring to interest professional scientists of the East in the epigraphs which abound on the rocks of Round valley, not far from that city, and which are believed to be as old, if not older, than the hieroglyphics of earlier Egypt, to which they bear a strange resemblance.

It is believed by many that the strange markings constituted the names by which ancient tribes marked the sources of water supply for the benefit of those of their number who lived roving lives.

These hieroglyphics have never been deciphered, although they are matters of record in the leading museums of the country, it is said. The Indian tribes now living in their vicinity declare they are the work of the Indians of North America and that they antedate all aboriginal lore.

Some who have examined the strange markings in the flinty bowlders say the hieroglyphics closely resemble those of earliest Egypt and may replace the latter as the first written language of humanity.

They are found always in the vicinity of water supplies.

Salt Lake Is 75 Miles Long, 30 to 50 Miles Wide, and Has An Average Depth of 20 Feet

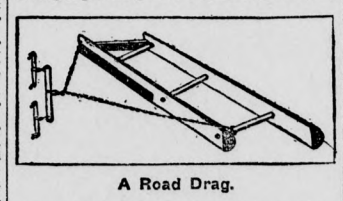
Perhaps no salt ponds anywhere in the world possess so many natural advantages as the Great Salt Lake, says Stanley W. Todd, in Popular Mechanics Magazine. Lying as it does in one of the great valleys of the Rockies, on the eastern edge of the great basin, the lake extends north and south for 75 miles, while its width varies from 30 to 50 miles. It has an average depth of 20 feet and is 4,218 feet above the sea level. There is little rainfall throughout the year, and the ever-present sun, together with the flat shores, contribute to the ideal conditions of summer operation.

The lake has no outlet and the water is as nearly saturated with salt as it can be without crystallizing. Great strides have been made in recent years in the methods of making high-grade salt, both by the grainer and vacuum-pan processes. Solar evaporation and grainer methods are used at Salt Lake, the mill being located at a place called Saltair. During the season when the harvesting is under way, the water is pumped from the lake at the rate of from 10,000 to 12,000 barrels a day, the pumping being carried on from ten to 14 hours.

BUILD SPLIT-LOG ROAD DRAG

Main Point to Remember Is That Device Should Be Faced With a Strip of Old Iron.

Everybody knows about the split-log road drag and the cut here shown is so clear that it needs little explanation. The main points to be remembered are that a part of the front portion of the drag should be faced with a strip of iron (an old wagon tire will do) and the hitch so arranged that the drag will move along at an angle—always pushing the loose dirt toward



A Road Drag.

the center of the road. The occasional use of this drag on any road will certainly improve it and no farmer will make a mistake in constructing one and using it on the highways that pass through his farm.

RESTORATION OF OLD PHRASE

Much Has Been Said About "Great Railroad Centers," Now Speak of "Highway Centers."

During the past half century there has been much in the prints about "great railroad centers." A new phrase is gradually but surely coming into use—"great highway centers." It is the restoration of a phrase that is more than 4,000 years old, but it has an entirely modern meaning.

Make more Money
Pull big stumps by hand

Clear your stump land cheaply — no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable.
Works by leverage — same principle as a jack. 100 pound pull on the lever gives a 48-ton pull on the stump. Made of the finest steel—guaranteed against breakage. Endorsed by U. S. Government experts.

CALOMEL SELDOM SOLD HERE NOW

Nasty drug salivates, makes you sick and you lose a day's work.

Every druggist in town—your druggist and everybody's druggist has noticed a great falling off in the sale of calomel. They all give the same reason. Dodson's Liver Tone is taking its place.

"Calomel is dangerous and people know it, while Dodson's Liver Tone is perfectly safe and gives better results," said a prominent local druggist. Dodson's Liver Tone is personally guaranteed by every druggist who sells it. A large bottle costs but a few cents, and if it fails to give easy relief in every case of liver sluggishness and constipation, you have only to ask for your money back.

Dodson's Liver Tone is a pleasant-tasting, purely vegetable remedy, harmless to both children and adults. Take a spoonful at night and wake up feeling fine; no biliousness, sick headache, acid stomach or constipated bowels. It doesn't gripe or cause inconvenience all the next day like violent calomel. Take a dose of calomel today and tomorrow you will feel weak, sick and nauseated. Don't lose a day's work! Take Dodson's Liver Tone instead and feel fine, full of vigor and ambition.—Adv.

BROOD SOWS NEED PROTEIN

Feed During Period of Pregnancy of Greatest Importance—Supply Mineral Matter.

The feed of the brood sow during the period of pregnancy is of great importance, as she is not only maintaining her body and, in the case of immature sows, making a growth, but she needs a large amount of protein and mineral matter from which to develop a large and vigorous litter.

Laugh When People Step On Your Feet
Try this yourself then pass it along to others.
It works!

Ouch ! ! ! ! ! ! This kind of rough talk will be heard less here in town if people troubled with corns will follow the simple advice of this Cincinnati authority, who claims that a few drops of a drug called freezone when applied to a tender, aching corn or hardened callus stops soreness at once, and soon the corn or callus dries up and lifts right off without pain.

He says freezone dries immediately and never inflames or even irritates the surrounding skin. A small bottle of freezone will cost very little at any drug store, but will positively remove every hard or soft corn or callus from one's feet. Millions of American women will welcome this announcement since the inauguration of the high heels. If your druggist doesn't have freezone tell him to order a small bottle for you.—Adv.

Sergeant (to recruit after fruitless search for a suitable pair of trousers) Yon ain't no blinkin' use to us—wot you want to do is to apply for a transfer to the Highlanders.—London Opinion.

Her father—When I started out, young man, I didn't have a dollar and now——

Her Suitor—Have you 'er—got one handy about you sir?—Judge.

WHO IS TO BLAME?
Women as well as men are made miserable by kidney and bladder trouble. Thousands recommend Dr. Kilmer's Swamp-Root, the great kidney medicine. At druggists in large and medium size bottles. You may receive a sample size by Parcel Post, also pamphlet telling about it. Address Dr. Kilmer & Co., Binghamton, N. Y., and enclose ten cents, also mention this paper. —Advt.

Easily Solved

Teacher—Now, Johnny, suppose you wanted to build a $1000 house and had only $700, what would you do?

Johnny—Marry a girl with $300.

Our Ungarded Moments

Young Minister (receiving gift of fountain pen)—Thank you. I hope I shall now be able to write better sermons.

The Lady—I hope so.

HAVE YOU A SWEETHEART,
Son or Brother in camp or training for defense? If so, mail him a package of Allen's Foot-Ease, the antiseptic Powder for Tired, Aching, Swollen Feet, and prevents blisters and sore spots. Makes walking easy. Sold everywhere, 25c.—Adv.

HELP COAL SHORTAGE

(Prepared by the United States Department of Agriculture.)

Munition plants cannot burn wood, warships cannot burn it, nor, because of the transportation problem, can people living in cities. It is up to the farmers and people living in villages and small towns to use all the wood they can and help meet the coal shortage.

Itching Rashes

With Cuticura
Soap 25c. Ointment 25 and 50c.

Topography of Our Country Responsible for Tornadoes, Explanation of Scientists.

Why do some portions of the United States suffer from tornadoes, or cyclones, as they are generally but erroneously called, while others do not? The question is answered, notes a writer in People's Home Journal, by scientists of the United States weather bureau, who point to the topography of our country in explanation. Tornadoes occur in the Mississippi valley, anywhere from the Gulf of Mexico to the Canadian line. No portion of this area is more apt to suffer than another, the experts assert. This valley opens to the warm waters of the gulf on the south and is closed in on the west by the high wall of the Rocky mountains. Warm, moisture-laden winds from the gulf move northward in the spring and early summer and encounter the cold north and northwest winds that sweep down the east wall of the Rockies. When the opposing currents meet there is sometimes formed one of those rapidly revolving, funnel-shaped clouds so destructive of life and property.

Tornadoes travel southwest to northeast, and, in addition to their terrific whirling movement, which is too great to be measured, have a forward velocity of from 50 to 60 miles an hour. Their path may be from a few hundred yards to a mile in width.

The word "tornado," at first spelled "ternado," probably was derived from the Spanish tronada, which means thunderstorms. "Tornado" may have grown out of an attempt to combine this word with the Spanish word tornar, meaning to "turn," thus making it descriptive of a storm that turned or twisted.

Restaurants in Other Lands Serve Meals at Low Prices; Show Good Weekly Profits

American fried-egg financiers and pie plutocrats should take warning from abroad, suggests Thrift Magazine. The national restaurant of London, which was established to expose the profiteers, shows a profit of $350 a week or about 70 per cent on the investment. Lunches and suppers are sold for 25 cents and tea and breakfast for 15 cents. There is a profit of about two cents on each meal. The co-operative restaurant idea also has taken root in Paris, where ten publicly controlled restaurants, each seating 1,000 persons, are selling good meals for about 30 cents each.

In the average American restaurant today a man has to play a mean trick on his appetite if he expects to have much left out of a dollar after maintaining contact with a full meal.

Statistics show that there are 9,000,000 persons' who subsist in American restaurants from day to day. Among this vast army of bacon-and-egg experts there are many, no doubt, who would be glad to see the daily menu card speak in more conciliatory accents on the subject of hash and other luxuries.

SCRAPS OF HUMOR

An Embryo Humorist.

Mother (coming from pantry)—Robert, did you pick all the white meat off this chicken?

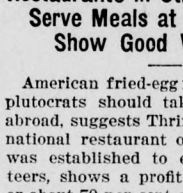
Bobby—Well, ma, to make a clean breast of it, I did.

The Proper Kind.

"They say that pilot gunboats ought to have signal guns when they go out in a fog."

"I should think they could better thread their way with a needle gun."

A Drawback.



"A woman can make any man propose to her she pleases."

"Certainly she can, but some women can't please any."

Enoughness.

"Did that burglar say: 'Enough,' when you attacked him?" asked Mr. Dolan.

"Of course he did," answered Mr. Rafferty. "Why wouldn't he say, 'Enough?' He had as much swag as he could carry and was trying to hold on to every bit of it."

The Reason.

"There is a great deal of atmosphere about dear Gwendolyn's letters."

"Why, is she sending them by the air route?"

Leaders of Opinion.

"What is your opinion—"

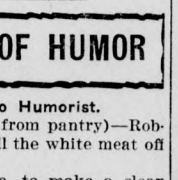
"Can't tell you now," replied Senator Sorghum. "I may have to go back home and interview my constituents personally to find out what my opinion about anything is."

Plain Now.

"Live and learn."

"Huh?"

"Now I understand why the kaiser didn't declare war on Holland."



Desperate Measures.

Edith (visiting)—I didn't know you liked classical music, but I see you have a number of pieces.

Mame—I hate it; but sometimes one has to play it in order to get a man to go home.

WOOD VS. COAL FOR HEATING

One Cord of Well-Seasoned Hardwood Equal in Value to One Ton of Anthracite.

(Prepared by the United States Department of Agriculture.)

In heating value one standard cord of well-seasoned hickory, oak, beech, birch, hard maple, ash, elm, locust or cherry wood is approximately equal to one ton (2,000 pounds of anthracite coal. However, a cord and a half of soft maple and two cords of cedar, poplar or basswood are required to give the same amount of heat.

One cord of mixed wood, well seasoned, equals in heating value at least one ton of average bituminous coal.

Your Eyes

Murine Eye Remedy Co., Chicago.

Overcame the Difficulty

A little girl was sent by her mother to the grocer's with a bottle for a quart of vinegar.

"But, mamma," said the little one, "I can't say that word."

"But you must try, said the mother, "for I must have vinegar, and there's no one else to send."

So the little girl went with the bottle, and as she reached the counter of the store she pulled the cork out of the bottle with a pop and said to the astonished shopman:

"There! Smell that and give me a quart!"—Pearson's Weekly.

A Lady of Distinction.

Is recognized by the delicate fascinating influence of the perfume she uses. A bath with Cuticura Soap and hot water to thoroughly cleanse the pores, followed by a dusting with Cuticura Talcum Powder usually means a clear, sweet, healthy skin.—Adv.

Tough Chicken

Macombe Journal: "The Ladies Aid of the Second Baptist colored church will give an entertainmeut on Tuesday, consisting of chicken and refreshments. Come one, come all, and help us in this great titanic struggle."

Safe and Sane

"You bought a lot of Liberty bonds?"

"Yes. A Liberty bond was about the only thing I found that could be bought at its regular value during war times."

A Difference

"I thought you said the aviator had made a failure of his trip."

"I didn't say anything of the kind. I said it was all up with him."

Persistent Coughs
are dangerous. Get prompt relief from Piso's. Stops irritation; soothing. Effective and safe for young and old. No opiates in

A Puzzle In Punctuation.

"A funny old man told this to me
I fell in a snowdrift in June, said he
I went to a ball game out in the sea
I saw a jelly fish float up a tree
I found some gum in a cup of tea
I stirred my milk with a big brass ke
I opened my door on my bended knee
I beg your pardon for this said he
But 'tis true when told as it ought to be
'tis a puzzle in punctuation you see."

What Did You Do?

Did you give him a lift? He's a brother of man,
And bearing about all the burden he can
Did you give him a smile? He was downcast and blue
And the smile would have helped him to battle it through.
Did you give him a hand? He was slipping down hill,
And the world, so fancied, was using him ill.
Did you give him a word? Did you show him the road
Or did you just let him go on with his load?

Did you help him along? He's a sinner like you,
But the grasp of your hand might have carried him through.
Did you bid him good cheer? Just a word and a smile
Were what he most needed that last weary mile.
Did you know what he bore in the burden of cares,
That is every man's load and that sympathy shares?
Did you try to find out what he needed from you.
Or did you just leave him to battle it through?

Call for Belgian Aid

Monday, Feb. 10

The Committee for Belgian relief announce that the next drive will begin Monday, Feb. 10th. Gifts of underwear, coats and suits are especially desired. These must be scrupulously clean and well aired. This is especially important because of the prevalence of influenza. Articles may be left at the coffee club. The key is at Beal's drug store.

This notice is for the United Campbell District, including the Cambrian San Tomas, Moreland and Hamilton school districts.

Those who wish may leave articles at the various school houses. They will be collected by representatives of the several districts and brought to Campbell; and later taken to San Jose. The San Jose Headquarters is located at 7 West Santa Clara St. This is probably the last call that will be made for Belgian assistance, but it is a very urgent call and should be answered by a hearty response.

Mrs. C. M. Johnson's Birthday

A very happy occasion was the surprise party at the home of Miss Kitty Johnson Saturday, when a number of friends from North Dakota and Minnesota gathered to help celebrate Mrs. C. M. Johnson's 79th birthday at a very pleasant luncheon. The table was laid for eight persons, and the crowning feature was the birthday cake with its 79 lighted tapers. The Press desires to unite with all of the rest of Mrs. Johnson's friends in hearty good wishes.

AN OFFICIAL TEST

Published By Request

The experiments made at Goat Island by Navy doctors in an effort to learn something about the Influenza germ, carry a lesson that every person should study and understand.

Fifty young sailors volunteered to become influenza victims that the doctors might study the disease more carefully. These young men had no fear of the disease; they willingly offered themselves. They were placed with Flu patients; they were given jars of Flu germs which they breathed into their lungs; they had Flu germs injected into their bodies. Then the medical men prepared to study the cases as they developed.

But no cases developed among these fifty sailors!

These men had been inoculated; they had been exposed to the disease in every manner; they had breathed in the germs and eaten and slept with Flu victims, and not one of them became infected!

The medical men confessed themselves baffled. All their ideas of the disease were turned topsy-turvy. The bunk about the masks were again exposed; and it was shown that the disease was not communicable, not contagious. The doctors are still wondering. The explanation, however, is simplicity itself, for it was proved by each one of these fifty young men.

These fifty young men volunteered to set as subjects upon which to be experimented. This showed clearly that they did not fear the disease. In other words, they could not acquire what they did not fear. Since their fear of the disease was gone, the disease was absolutely non-existent, even though every effort was made to force it on them.

There can be no clearer nor better proof of the oft stated and rapidly being accepted fact that mind controls matter. Medical men are now acknowledging this condition. They are the first to tell patients to eliminate fear. When this is done, their work is done. There would be no cases of Influenza if every person in the State would do as these fifty Goat Island sailors did; namely, eliminate fear of the disease.—*Oakland Enquirer.*

THERE ARE A FEW PEOPLE in the United States of America who seem to regard it as a self evident truth that we are the only nation represented at the Peace Conference whose aims and aspirations are wholly unselfish. Pure and unadulterated altruism is a pretty rare commodity, yet there is a reasonable doubt whether even we have been able to corner the entire supply of the world. Since we are utterly unselfish, would it not be very appropriate for us also to be as charitable as possible in our attitude toward the othea nations of the world?

IS THERE ANYTHING IN THIS, or is the editor of the *Chronicle* merely giving free rein to his own "imagination"?

In the course of what to some may seem a very few months the United States will be as "dry" as the desert, and it is well within the bounds of possibility that the other side of the Mexican border may flourish as the green bay tree.

The Governor of Lower California appears to be a man of imagination, and it may be that he has visions of blossoming into something like the Prince of Monaco, the titular dignitary of a flourishing province rejoicing in the possession of another Monte Carlo.

Tia Juana is already a prosperous gambling community, but with sufficient capital it might be converted into a world-famed beauty spot centered in gorgeous parks and equipped with palatial hotels.

We may be making a big future for the Mexican border.—*San Francisco Chronicle.*

It Wasen't Me!

"It wasn't me," said William, when they charged him with the crime. "As anyone will tell you, I was absent at the time. And ere I went, my ministers I beckoned to advance, and said to them, 'For goodness sake, don't interfere with France!' And when I heard poor Belgium had been dragged into the strife, I never was so horrified in all my humble life. I hurried back to Potsdam, and I cried, 'This mustn't be!' And so, as you will readily perceive, it wasn't me!"

"It wasen't me!" the Crown Prince said. "The mischief was begun while I was by our silver sea and basking in our sun. I didn't want to fight, but had to do as I was bid—which was to lead an army and to see that others did! To show how very little for the fight I was inclined, I always led my men from a position miles behind. I argued that the air raids were absurd to a degree, and drowning children silly. So you see, it wasn't me!"

"It wasen't me"! said Hindeuburg. "As I have said before, there's nothing I detest so much as things to do with war. My mother always told me that the object of my birth was all to do with fostering a scheme of peace on earth. To understand how thoroughly those leanings I possess, you've only got to ponder on my portraits in the press I've frequently been taken for an angel; so you see, the Kaiser was the criminal-in-chief, it wasn't me!"

"It wasa't me!" said Ludendorff. "The day I heard the plot I tried to get exemption as a 'conchie' on the spot! But Fate upon my shoulder laid a military hand, and, rounding up a lot of men, she put me in command! Reluctantly I led them at the earnest wish of Fate, but said I'd have them punished if they sang the Hymn of Hate. I bade them sing a song of Love in some sweet minor key—a song entitled 'Kamerad'; and so it wasn't me!"

"It wasn t me," said Fritzie, as he wiped his bloody hand. "They told me that the Belgians had attacked the Fatherland. And so I took my rifle—what else was I to do? And shot up them invaders, perhaps a nurse or two. But when I saw the U. S. A. upon the battle line, I knew we'd made a blunder, so I scampered on the Rhine. I never did believe in war. I'm as gentle as can be. And so, kind sirs, you'll let me off—it wasn't me."

"It wasn't me" said Tirpitz. "Every U-boat, as you know, I asked should be a dummy, just to make a bit of show! "It wasn't me!" said Rupprecht, "I can evidence produce, that when they mentioned gas-shells I objected to their use!" "It wasn't me!" said Scheidemann and Hollweg in a breath. "I absolutely hated sending millions to their death! With every move the Kaiser named I begged to disagree. I knew that Right must conquer Might! . . . It clearly wasn't me."

Local and Personal

For Sale or Rent, the Palmer Place on Los Gatos Road. Phone S. J. 412.

Mrs. Annie V. McGee, Who has been visiting here for some time with her sister Miss Caldwell, went last week to join her husband in Los Angeles where they expect to make their home.

Mrs. W. E. Eckles is in receipt of a cablegram from Mr. Eckles stating that he would sail from France, Saturday, February 8th. A letter written some time before told of his having been in the hospital with an attack of influenza.

Mr. and Mrs. Darrell Papst and daughter, of Sisson are visiting with her parents, Mr. and Mrs. W. R. Coupland on Hamilton avenue. Mrs. Coupland went to Sisson recently to assist in nursing the family thru the flu and they returned with her to recuperate here.

Cecil Kennedy has received his discharge and is in charge of the home ranch recently purchased by his brother, E. R. Kennedy. Mr. and Mrs. Kennedy have taken their former rooms in the Alpha apartments.

Robert and Edgar Kennedy are both at home, Robert to remain, and Edgar on furlough from the Navy, at San Diego where he has been stationed since the first of the year.

Mr. W. B. Lowry is selling out his bakery business. When his son, who is now in the navy returns home, they expect to purchase a truck and do hauling.

Mrs. H. P. Wilkins, of Seattle, and her infant son, are visiting her sister Mrs. Mrs. H. C. Smith this week.

Dr. Cooper, Mr. Hill, Mr. Mc Caughy, Mr. Zion, and Mr. Alex Merrill went to Los Gatos Thursday afternoon to attend the funeral of an old soldier brother, a Mr. Irwin of Los Gatos. The old soldiers are passing away very fast, at the rate of 3000 a month we are told.

Roosevelt Day

Roosevelt Day will be celebrated at the Campbell Grammar school at 1:30 Friday afternoon. There will be exercises by the children. Perhaps Miss Howe, County Superintendent, will speak. Everyone is invited.

Punditta Circle.

The life of Theodore Roosevelt was the well chosen subject entertained by the Punditta Circle for the meeting on February 5th at the home of Mrs. Corning. Mrs. Nelson, the efficient chairman of the day, very efficiently selected and assigned the topics in which the life of Theodore Roosevelt was earnestly reviewed. Though the day was rainy the ladies who ventured out felt duly recompensed for paying tribute to one who stands, to our country, as the personification of our highest ideals.

For the sake of sociability very light refreshments were daintily served by the hostess. The Circle adjourned to meet at the home of Mrs. Pardee.

Roosevelt Honored

State Council of Defense Passes Resolutions

"The Good deeds of Theodore Roosevelt have inscribed his name in letters that will remain bright and clear for posterity;

"For he loved his country with an absolute devotion and out of this love gave to its service, gladly and unreservedly, and with a never failing sense of civic responsibility, all that he had to offer, an intense zeal, an unsurpassed courage, a splendid intellect and remarkable vision.

"He strove ever with his full strength to right wrong as he saw it.

"That which he advocated he lived, thereby setting an example of finest patriotism.

"His service to the nation lifted him far above all partisanship.

"He merits the most distinguished recognition that citizens of the United States can confer.

"His life and his works will forever operate upon American minds and hearts to make them more loyal to our nation's flag.

"His passing has brought grief to his countrymen. His loss is the nation's loss.

"And the State Council of Defense of California enters this minute of the great American upon its records and directs that a copy be sent to the widow and children of Colonel Theodore Roosevelt and to the Council of National Defense and to each State Council."

That California—where the man and statesman Theodore Roosevelt was loved or admired by all, be on record in honoring him, the Advisory War Cabinet and Executive Committee of the State Council of Defense, passed the above resolution.

Director Chas. C. Moore had already requested the County Divisions of the Council to arrange in every County, and urge upon every County, and urge upon every Community proper observance of the national Memorial Day, February 9, set by Congress.

Congress—The bill to give the name of Roosevelt National Park to the country of the giant redwoods in California passed the Senate on Jauuary 16.

Both houses passed the bill making the Grand Canon a National Park.

Methodist Church Notes

Methodist Episcoal Church.
J. O. Duncan Pastor
Sunday School 9:45.

Every one cordially invited to attend.

Ladies Plan Food Sale

A sale of home cooked foods for Friday, Feb. 21st, was decided upon at the meeting of the Home and School Club Tuesday. The funds of the club are getting low and in order to purchase materials for the relief sewing on which the ladies are engaged this plan was adopted for raising money. Any one willing to contribute to this cause by donating anything to the sale kindly notify any member of the Club.

The president reported that 14 pinafores, and four fine comforts, the combined donations of the school, the W. C. T. U. and the club had been taken in to relief headquarters since the last meeting.

High School Notes

The students of Campbell High School are holding a series of drives which are in the form of a contest. The class that wins per capita receives a banner to hang in its room. For iustance, if the English Class should win the banner during the paper drive it could have the pennant until some other class wins in a following drive. Each class in session the first period in the morning appoints a captain to supervise the drive for that week.

For the paper drive last week, each studeut brought all the paper material he could find, which consisted of magazines of all kind, newspapers, and cardboard. Friday afternoon the paper was neatly divided into bundles of uniform size and carefully tied and then was weighed. The following is a table to show you the number of pounds of paper brought by each class;

	No. pounds	pounds per c.
English I-B.—	2007¾	118 1-7.
English I-W.—	1004¾	71—
Physics—	832	55 7-15.
Advanced Sewing-	489½	30 9-16.
French	119	7.
Freehand Drawing-	1332	83¼.

Monday morning Doris Leviston presented the banner to Irene Tolls who was the chairman of the English I. B Class.

This is the week for tinfoil and scrap metal. Don't be alarmed if you are asked to give to a good cause! These drives are for the benefit of the Red Cross.

W. C. T. U. Notes

In spite of unpleasant weather, the meeting with Mrs. Merriam was largely attended.

Usual devotionals by Mrs. Ella Kennedy and Mrs. Duncan, followed by Declaration of Principles and saluting of the flag.

During the half hour of business some important commiltees were appointed and communications considered. The president reported a gift of a pieced-top for another bed comfort made by the faithful recording secretary, Miss Luella Caldwell, which had been finished and sold, the money being sent the needy Serbians. The literary program followed. Reading, "The Owl-Critic," Mrs. Whitman, "Symposium of Opinions, pro and con of the Eighteenth Amendment," Miss Marshman. Song, Mrs. Broadie, Miss Daisy Pannell and Mrs. Duncan, with Miss May Pannell at the piano. Reading, "Extracts on Friendship", Mrs. Baldwin. Piano Solo, Pauline Baker, who kindly responded to an encore with a delightful rendering of "Humoreske".

During the social hour "Hearts" were much in evidence with bright and often complimentary quotations inscribed upon heart-shaped favors, the work of the resourceful, energetic president, Mrs. Baldwin.

Delicious refreshments were served by the hostess and her daughters. Mr. and Mrs. Broadie expect soon to return to their eastern home and presentations of two books,—one, beautifully leather-bound, "Friendship", the other a hand-painted Guest Book in which those present wrote their names, with or without quotations. In presenting the Guest book Mrs. Merriman read the following inscription

We trust you know how much we love you,
And all the things we long to say;
Surely we hope the day's not distant
When you'll return and come to stay.

A valued member who is ill was tenderly remembered.

Congregational Church Notes

All church services as usual.
Sunday School at 9:45.
Christian Endeavor at 6:30.
Evening Service at 7:30.
Anti-Saloon League Rally at the Congregational Church Sunday morning at 11:00 o'clock.
